

HikeSathi – Hike & Trek Management System

Project Demonstration

Presented By:
Pratik Bhattarai

PROBLEMS

Nepal's trekking & hiking ecosystem is fragmented, manual, and unverified.

01.

Hikers struggle to find trusted and verified event organizers

02.

Registrations & payments are handled manually via calls, messages, and cash

03.

Organizers lack tools to manage participants, payments, and events efficiently

Solution and UVP

- ✓ Centralized platform for discovering trekking & hiking events
- ✓ Verified organizers with documents, reviews & ratings
- ✓ Digital event registration & group booking

Unique Value Proposition

A trusted, event-focused trekking platform built specifically for Nepal

**Combining discovery + trust +
management in one place**

My Internship Focus

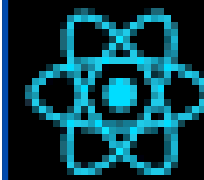

During my internship:

➤ I worked on FullStack development

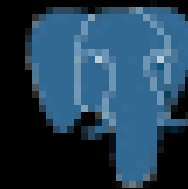

➤ I focus on:

- Core Java
- TypeScript
- Spring Boot and React
- Database design
- System architecture
- REST APIs

Full Stack Developer Web App

React.Js

PostgreSQL

Spring boot

Typescript

TARGET USERS

1. Hikers

- Go on short hikes
- Find events easily
- Compare price, difficulty, and duration
- Book trips online

2. Trek & Hike Organizers

- Trekking agencies
- Local hiking groups
- Adventure clubs

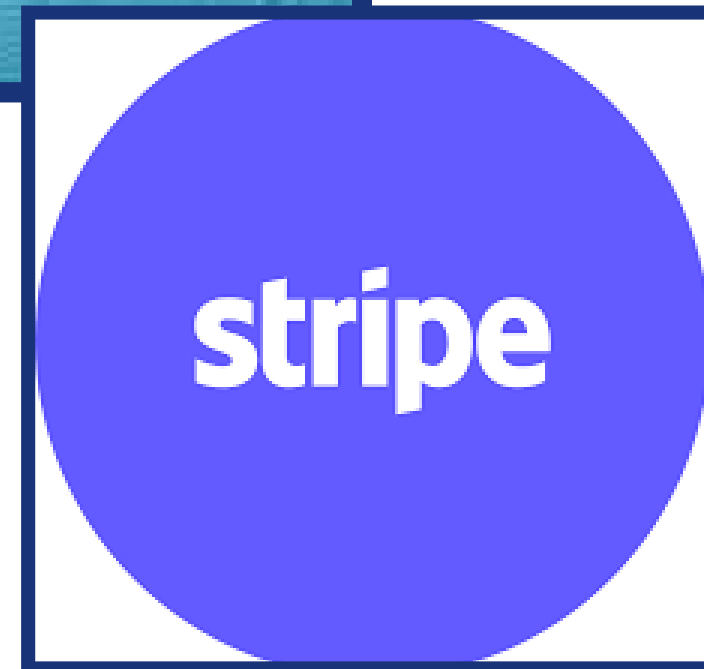

Key Features

For Users

- ✓ Browse hikes & treks
- ✓ Filter by date, difficulty, duration
- ✓ Book events
- ✓ View details
- ✓ AI chatbot recommendation
- ✓ Payment gateway (Esewa, Stripe)

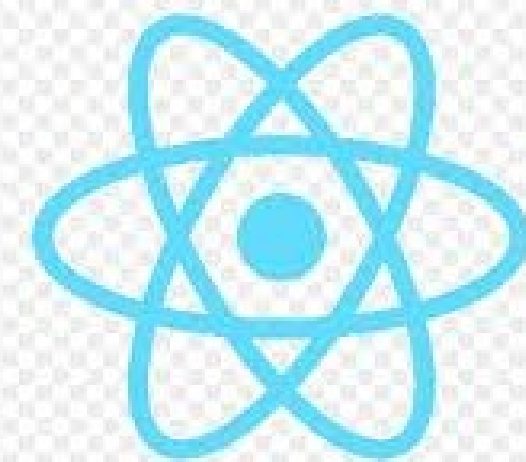

For Organizer

- ✓ Create events
- ✓ Manage participants
- ✓ Real-time group communication
- ✓ Send Bulk Email

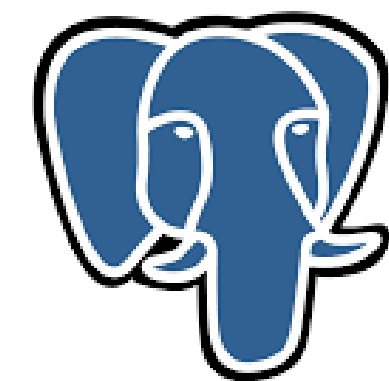

TECHNOLOGY STACK

Layer	Technology
Frontend	React TypeScript
Backend	Java Spring Boot
Database	PostgreSQL
Version Control	Git & Github
API	REST API
AI Model	Ollama (LLaMA 3.2)
Vector Database	Qdrant

React

PostgreSQL

Business Model

Core Revenue Streams

- ✓ Commission per successful event registration
- ✓ Organizer subscription plans (Freemium → Premium)

Long Term Monetization and Expansion

- ✓ Featured event promotions
- ✓ Partner services (gear rental, insurance)
- ✓ Data & analytics tools for organizers

WHAT I LEARNED FROM THIS PROJECT

**Through HikeSathi and Verisk internship,
I learned:**

- How to design APIs
- How to manage database relations
- How to write clean and maintainable Java code
- How to apply OOP in real systems

Limitation

- ✓ **Live GPS Trek Tracking**
- ✓ **Weather-based AI Suggestions**
- ✓ **Advanced AI Recommendation System**

Future Enhancements

- ✓ **Live GPS Trek Tracking**
- ✓ **Weather-based AI Suggestions**
- ✓ **Advanced AI Recommendation System**

CONCLUSION

- HikeSathi aims to make hiking and trekking in Nepal more accessible, organized, and intelligent through technology.

Thank You !!!
